

Blazingly fast create flashcards from PDFs

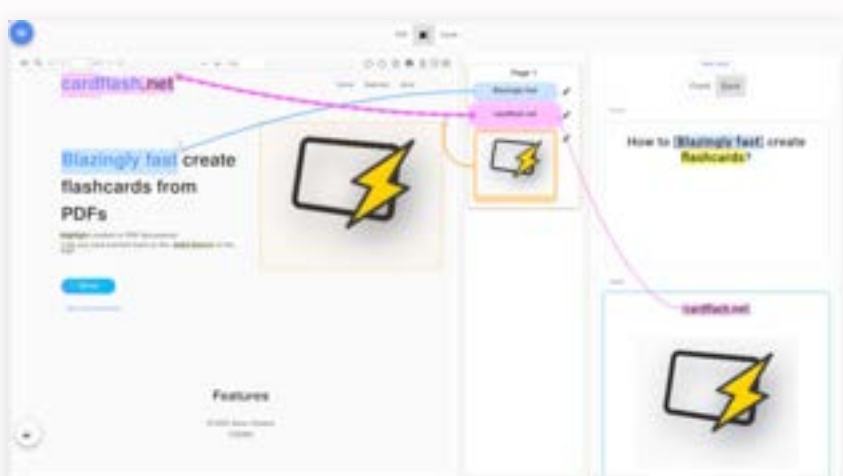

Highlight content in PDF documents
Link you card content back to the
exact source in the PDF

Try it out

[Take a look at all features](#)

Features

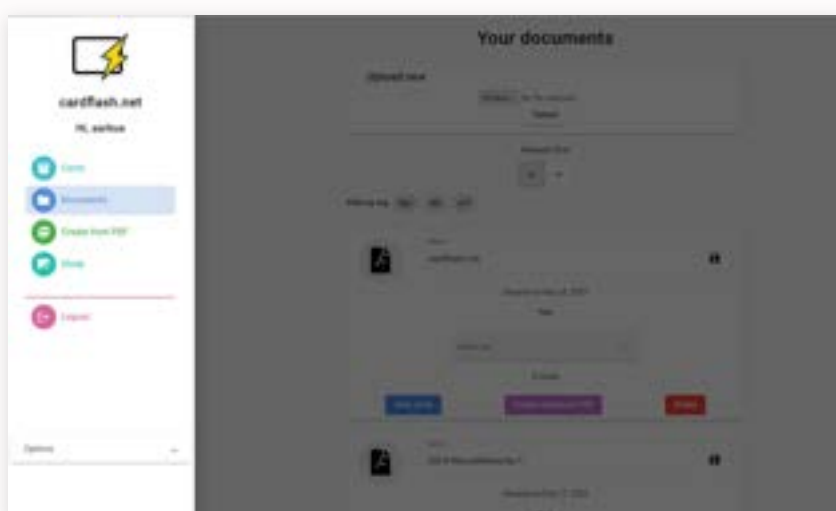

Annotate your lecture
notes, documents or
books and
create flashcards
simultaneously

Study your cards directly in the web app or send them to Anki to fit your existing workflow

Organize and tag your cards and documents

Keep you cards and documents completely secure offline or optionally sync them to multiple devices with a free account

Documentation

1. Start by visiting app.cardflash.net. In the *Documents* view you can then select a pdf file to use.
2. When the document is processed, it will appear in your document list. Click on *Create cards from PDF* to open the card creation view.
3. To annotate text in the pdf, select the text and click on one of the appearing color options
4. The content you highlighted can be directly inserted on to the current flashcard, but this setting can be changed in the options menu inside the side panel.
5. You can also select an area, that can be inserted as an image or as text content. For that simply select a rectangular region with the right mouse button. Alternatively click on the button on the bottom left to select an area with your primary mouse or touch input.
